Deployment:

The site is currently live at http://trainingsiteapp.herokuapp.com/

Deployment Instruction:

This app has been deployed on Heroku. Heroku abstracts its environment as a git remote url for your repository. After pushing to the heroku remote, heroku will attempt to run your app based on the procfile that you include. This procfile starts the web server which gets the web application information from wsgi.py. We used gunicorn as the built in Django webserver that you can run from manage.py should never be used in production.
